I am writing to express my strong interest in the Trade Support Engineer role at DV Trading. With 2.5 years of hands-on experience in Prime Brokerage operations at Morgan Stanley and a Master's degree in Investment & Risk Finance (Distinction), I bring a solid foundation in trade lifecycle management, real-time problem solving, and cross-functional collaboration that aligns directly with the demands of supporting a fast-paced proprietary trading environment.

At Morgan Stanley, I worked at the intersection of trading and technology-managing trade settlement and reconciliation across multiple asset classes, resolving breaks and discrepancies under tight deadlines, and coordinating with front-office traders, developers, and middle-office teams to ensure seamless post-trade processing. I became proficient in identifying system issues, escalating appropriately, and implementing process improvements that reduced manual intervention. My advanced Excel/VBA skills, combined with daily use of Bloomberg, CTM, and Refinitiv Eikon, gave me strong technical fluency in the tools and workflows that underpin trading operations.

DV Trading's model-proprietary capital, in-house strategies, and rapid scaling across global markets-excites me because it demands exactly the kind of proactive, technically minded support I thrive in providing. I am eager to work directly alongside your Development and Trading teams, bridging the gap between technology and execution to help maintain DV's competitive edge. Having briefly stepped into a commercial role, I am now fully committed to returning to financial markets, where my skills and passion are best applied.

I would welcome the opportunity to discuss how my background can contribute to your London team. I do require Skilled Worker visa sponsorship and am happy to provide further details.
