

Dear Hiring Manager,

I am writing to express my strong interest in the Underwriting Operations Analyst position at Starr International Company. With five years of experience in operations, data integrity, and stakeholder management across financial services, I am confident I can contribute meaningfully to your underwriting operations team.

In my current role at Morgan Stanley's Prime Brokerage division, I investigate and resolve trade settlement discrepancies across multiple systems daily - work that directly mirrors the data accuracy and validation responsibilities of this position. I manage queries with counterparties and internal teams, ensuring reconciliation breaks are identified, escalated, and resolved efficiently. This experience has sharpened my analytical rigour and attention to detail when working across complex, interconnected systems.

Prior to this, my two and a half years as an Operations Analyst at Mphasis involved optimizing operational processes, enforcing procedural guidelines, and supporting change initiatives - all while maintaining high standards of data quality and stakeholder communication. I developed a strong foundation in identifying process inefficiencies and implementing improvements that enhanced accuracy and throughput.

I am genuinely enthusiastic about transitioning into London Market insurance operations. The opportunity to apply my data validation expertise and process optimization skills within the underwriting environment at Starr International is deeply appealing. While I am eager to develop technical knowledge of systems such as Eclipse and Sequel UW, my proven ability to master complex platforms quickly, combined with my MSc in Investment and Risk Finance, positions me well to add value from day one.

I would welcome the opportunity to discuss how my experience aligns with your team's needs.

Yours sincerely,
Nidhi Shetty
