I am writing to express my strong interest in the IT Project Manager, Futures Clearing position. With 2.5 years of post-trade operations experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction), I bring a unique combination of hands-on clearing and settlement expertise with the analytical rigour needed to drive technology-led transformation in derivatives operations.

At Morgan Stanley in Glasgow, I managed end-to-end trade settlement and reconciliation workflows across multiple asset classes, working at the intersection of operations and technology. I collaborated with IT teams to resolve system breaks, optimised processes using advanced Excel/VBA automation, and developed deep familiarity with the clearing lifecycle-from trade capture through to final settlement. My daily use of platforms including Bloomberg, CTM, and Refinitiv Eikon gave me strong insight into how technology underpins efficient clearing operations, while handling corporate actions and exception management sharpened my ability to coordinate across stakeholders under time pressure.

This role excites me because it sits precisely where my experience converges: futures clearing operations and technology project delivery. My operations background means I understand the pain points and regulatory nuances that IT solutions must address, while my analytical training equips me to translate business requirements into actionable project milestones. I am eager to leverage this blend of domain knowledge and technical aptitude to deliver meaningful improvements to your clearing infrastructure.

I would welcome the opportunity to discuss how my background aligns with your team's objectives. I do require Skilled Worker visa sponsorship and am happy to provide further details. Thank you for your consideration.
