I am writing to express my strong interest in the Internal Model Operations Specialist position. With 2.5 years of post-trade operations experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction), I bring a solid foundation in the operational and quantitative disciplines that underpin internal model frameworks.

At Morgan Stanley in Glasgow, I managed trade settlement, daily reconciliation, and corporate actions processing across multiple asset classes, developing a deep understanding of trade lifecycle mechanics and the data integrity standards essential to model operations. I built advanced Excel/VBA tools to automate reconciliation workflows and exception reporting, reducing processing times and improving accuracy-skills directly transferable to maintaining and monitoring internal model inputs, outputs, and validation processes.

My academic grounding in risk finance, combined with hands-on experience using Bloomberg, CTM, and Refinitiv Eikon, gives me a strong appreciation for the interplay between market data, risk modelling, and regulatory requirements. I am highly detail-oriented, comfortable working within controlled operational environments, and experienced in collaborating with front-office, technology, and compliance teams to resolve discrepancies and ensure process robustness.

I am eager to return to financial services in a role that leverages both my operational expertise and quantitative training. I would welcome the opportunity to discuss how my background aligns with your team's needs. I do require Skilled Worker visa sponsorship and am happy to provide further details on this at your convenience.

I look forward to hearing from you.
