I am writing to express my strong interest in the Operational Risk Manager - Commodity Markets and Finance position. With 2.5 years of post-trade operations experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction), I bring a solid foundation in identifying, assessing, and mitigating operational risk across complex trading environments.

At Morgan Stanley, I managed trade settlement and reconciliation processes across multiple asset classes, working closely with front office, compliance, and counterparty teams to resolve breaks and escalate risk events. I developed expertise in the full trade lifecycle-from execution through corporate actions processing-giving me a granular understanding of where operational failures arise and how controls can be strengthened. My advanced Excel/VBA skills enabled me to build automated reconciliation tools that reduced manual errors and improved reporting turnaround times.

My MSc in Investment & Risk Finance equipped me with formal frameworks in market risk, credit risk, and operational risk management, including scenario analysis and key risk indicator development. While I have spent the past year in an advertising role, this experience sharpened my stakeholder management, analytical thinking, and ability to communicate complex information clearly-skills directly transferable to engaging with trading desks and senior leadership on risk matters. I am eager to return to financial services and believe commodity markets present a dynamic environment where my operational expertise and risk awareness can add immediate value.

I would welcome the opportunity to discuss how my background aligns with your team's needs. I do require Skilled Worker visa sponsorship and am available at your earliest convenience.
