I am writing to express my strong interest in the Operational Risk Manager, Commodity Markets and Finance position. With 2.5 years of post-trade operations experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction), I am eager to bring my operational expertise and risk-focused mindset to your commodity markets team.

At Morgan Stanley in Glasgow, I managed end-to-end trade settlement, daily reconciliations, and corporate actions processing across multiple asset classes. This role required me to identify and escalate operational risks in real time, collaborate with front office and middle office teams to resolve trade breaks, and ensure adherence to strict regulatory and internal controls. I developed a strong understanding of how operational failures translate into financial and reputational risk-experience directly applicable to managing risk within commodity trading and finance operations.

My technical proficiency in Excel/VBA, Bloomberg, CTM, and Refinitiv Eikon enables me to analyse large datasets, build monitoring tools, and support risk reporting frameworks. My MSc dissertation focused on portfolio risk modelling, reinforcing my ability to assess risk quantitatively. Though I briefly transitioned into an advertising role, this sharpened my stakeholder management and communication skills-capabilities essential for engaging with traders, compliance teams, and senior leadership on risk matters.

I am highly motivated to return to financial services in a role that leverages my operational background within a risk management framework. I would require Skilled Worker visa sponsorship and would welcome the opportunity to discuss how my experience aligns with your team's needs.

I look forward to the opportunity to contribute to your organisation.
