I am writing to express my strong interest in the Production Engineer role within the Global Prime Brokerage & Financing Platform team in London. With 2.5 years of direct experience in Prime Brokerage operations at Morgan Stanley, combined with my technical skills and postgraduate finance qualification, I am well-positioned to contribute to your platform's stability and performance.

At Morgan Stanley's Glasgow office, I worked extensively across trade settlement, reconciliation, and post-trade operations within the Prime Brokerage division. I developed a deep understanding of the trade lifecycle, corporate actions processing, and the critical importance of seamless production environments in supporting front-office activity. My daily work required meticulous attention to operational risk, real-time issue resolution, and cross-functional collaboration-skills directly transferable to a production engineering role supporting a global financing platform.

I bring advanced proficiency in Excel/VBA, Bloomberg, CTM, and Refinitiv Eikon, alongside strong analytical capabilities honed through my MSc in Investment & Risk Finance (Distinction) from the University of Westminster. I am confident in my ability to monitor, troubleshoot, and optimise production systems while bridging the gap between technology and business stakeholders. After a brief period outside finance, I am highly motivated to return to the industry where my expertise and passion lie.

I would welcome the opportunity to discuss how my Prime Brokerage background and technical skills align with your team's needs. I would require Skilled Worker visa sponsorship and am happy to provide further details. I look forward to hearing from you.
