I am writing to express my strong interest in the Regulatory Data & Reporting Analyst position. With 2.5 years of experience in Prime Brokerage operations at Morgan Stanley and a Master's degree in Investment & Risk Finance (Distinction), I bring a solid foundation in financial data management, regulatory processes, and analytical rigour that aligns directly with this role.

At Morgan Stanley in Glasgow, I worked extensively with trade settlement, reconciliation, and post-trade operations-disciplines that demand precision, data integrity, and a thorough understanding of regulatory frameworks. I regularly handled large datasets, identified discrepancies, and ensured reporting accuracy across multiple systems including Bloomberg, CTM, and Refinitiv Eikon. My advanced Excel and VBA skills enabled me to automate workflows and improve efficiency within the team, while my understanding of the full trade lifecycle gives me the contextual knowledge essential for meaningful regulatory reporting.

I am currently working as an Advertising Account Manager, a role that has sharpened my stakeholder communication, project management, and deadline-driven delivery. However, my passion remains firmly in finance, and I am eager to return to a data-focused analytical role where I can apply my technical expertise and industry knowledge. I am motivated by the opportunity to contribute to robust regulatory compliance and reporting standards within your organisation.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Please note I would require Skilled Worker visa sponsorship. I am available for an interview at your convenience and look forward to hearing from you.
