I am writing to express my strong interest in the Risk Manager (Finance and Payments) position. With 2.5 years of experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction), I bring a solid foundation in financial risk assessment, trade lifecycle management, and the operational controls that underpin secure payment and settlement processes.

At Morgan Stanley, I was responsible for trade settlement and reconciliation across multiple asset classes, identifying and escalating discrepancies that posed financial or operational risk. I managed corporate actions processing where accuracy and timely risk assessment were critical, and I developed a deep understanding of how failures in post-trade workflows can cascade into broader financial exposure. This experience gave me a practical lens on the intersection of finance, payments, and risk—precisely the domain this role demands.

My technical proficiency in Excel/VBA, Bloomberg, and reconciliation platforms such as CTM enables me to analyse large datasets, flag anomalies, and build reporting tools that support informed risk decisions. My MSc coursework in portfolio risk modelling, derivatives pricing, and quantitative analysis further strengthens my ability to assess and mitigate financial risk in a structured, data-driven manner.

I am currently seeking to return to financial services after a brief period in a commercial role that sharpened my stakeholder management and communication skills. I am eager to apply my combined operational and academic expertise to strengthen your risk framework. I do require Skilled Worker visa sponsorship and would welcome the opportunity to discuss how my background aligns with your needs.

I look forward to the opportunity to contribute to your team.
