I am writing to express my strong interest in the Underwriting Operations Analyst position. With 2.5 years of experience in Prime Brokerage operations at Morgan Stanley and an MSc in Investment & Risk Finance (Distinction), I bring a solid foundation in financial operations, risk assessment, and analytical rigour that translates directly to underwriting operations.

At Morgan Stanley in Glasgow, I managed end-to-end trade settlement, daily reconciliations, and corporate actions processing across complex multi-asset portfolios. This role demanded meticulous attention to detail, an ability to identify and escalate discrepancies swiftly, and close collaboration with front-office teams to resolve breaks under tight deadlines. These competencies—data accuracy, process discipline, and stakeholder communication—are directly applicable to supporting underwriting workflows, policy administration, and operational risk management.

My technical toolkit includes advanced Excel/VBA, Bloomberg, CTM, and Refinitiv Eikon, enabling me to analyse large datasets efficiently and build process improvements. My postgraduate training in risk modelling and portfolio analysis further equips me to understand the quantitative frameworks underpinning underwriting decisions. Although I have spent a brief period in advertising, this experience sharpened my client management and communication skills while reinforcing my commitment to returning to a finance operations career where I can add the most value.

I am based in the UK on a Skilled Worker visa and would require sponsorship. I would welcome the opportunity to discuss how my operations background and analytical skills can contribute to your underwriting team. Thank you for your consideration.
