I am writing to express my strong interest in the Valuation and Portfolio Analytics role. With 2.5 years of experience at Morgan Stanley's Prime Brokerage division and a Master's degree in Investment & Risk Finance (Distinction) from the University of Westminster, I bring a solid foundation in portfolio operations, financial analysis, and data-driven decision-making that aligns closely with this position.

At Morgan Stanley, I developed deep expertise in trade lifecycle management, daily reconciliation of portfolio positions, and corporate actions processing-work that required meticulous attention to valuation accuracy and analytical rigour. I regularly worked with complex multi-asset portfolios, ensuring P&L integrity and resolving discrepancies across counterparties. This experience gave me a strong understanding of how securities are valued, how portfolio data flows through operational systems, and how analytical precision supports front-office decision-making.

My technical skills in advanced Excel/VBA, Bloomberg, and Refinitiv Eikon enable me to manipulate large datasets, build automated reporting tools, and extract meaningful portfolio insights efficiently. My academic training in risk finance further strengthened my understanding of quantitative valuation methodologies, portfolio theory, and risk metrics-skills I am eager to apply in a dedicated analytics capacity.

I am currently transitioning back to financial services after a brief period in a commercial role that sharpened my client communication and project management abilities. I am highly motivated to re-engage with the analytical and technical work I am most passionate about. I would require Skilled Worker visa sponsorship and would welcome the opportunity to discuss how my background can add value to your team.

I look forward to the opportunity to connect.
