

Dear Hiring Manager,

I am writing to apply for the Trade Support Analyst role within JP Morgan's Prime Finance Trading Services team. Having spent over a year at Morgan Stanley's Prime Brokerage desk managing pre-matching and settlement of equity and fixed income trades for hedge fund clients, this role aligns directly with my experience and career ambitions.

At Morgan Stanley, I executed daily start-of-day and end-of-day risk controls, managed equity swap lifecycle events including corporate actions and expiries, and worked to maximise Straight-Through Processing rates — improving STP by 10% through reconciliation tools I built in Python and Excel. I collaborated daily with Front Office, Middle Office, and Back Office teams to resolve trade capture exceptions and settlement failures, often under same-day deadlines across US, EMEA, and APAC markets.

I bring strong knowledge of equity swaps, cash equities, and derivative products, along with hands-on experience supporting Prime and Hedge Fund trading desks. My proficiency in advanced Excel and Python (pandas, numpy) allows me to generate analytical reports and automate exception-flagging processes — skills directly relevant to this role. I would welcome the opportunity to contribute to JP Morgan's Prime Finance team and further develop my expertise in a market-leading institution.

I look forward to discussing how my experience can add value to your team.

Kind regards, Nidhi Shetty
