

Dear Hiring Manager,

I am writing to apply for the Equity Trade Control Analyst role at Bank of America. My experience at Morgan Stanley's Prime Brokerage, where I managed equity swap processing, pre-matching, and settlement controls across global markets, is directly relevant to this position.

I have hands-on experience verifying and escalating trade capture exceptions, executing daily risk controls, and ensuring accurate processing of corporate actions and lifecycle events. My technical skills include advanced Excel and Python (VBA, pandas), which I have used to build automated monitoring tools that flag discrepancies before they escalate into settlement failures.

I am drawn to Bank of America's emphasis on strong control frameworks and would bring both the operational discipline and technical capability required to maintain the integrity of equity trade processing in your team.

Kind regards, Nidhi Shetty
