

Dear Hiring Manager,

I am applying for the Equity Derivatives Trade Support Analyst position at Bank of America. With a Master's degree in Investment and Risk Finance (Distinction) and direct operational experience supporting equity and derivative trades at Morgan Stanley's Prime Brokerage, I meet both the academic and practical requirements for this role.

At Morgan Stanley, I supported hedge fund and institutional clients across equity swaps, futures, and options — managing lifecycle events, verifying trade captures, and resolving settlement exceptions across global markets. I developed strong proficiency in risk management systems (SafeGUI, TM) and advanced Excel, and have built Python-based tools for automating reconciliation processes and exception monitoring.

I understand the dynamics of equity derivatives trading desks and the operational rigour required to support them. My analytical problem-solving skills, combined with adaptability in fast-paced environments, would allow me to contribute effectively from day one.

Kind regards, Nidhi Shetty
